

# NATURAL HAZARDS

CORVALLIS, OREGON

NOTE:

Natural Hazards represented on this map based upon December 31, 2004 mapping and the Notices of Disposition for the Land Development Code Update signed by Mayor Berg on December 16, 2004.

Map refinements and corrections to the Natural Hazards appearing on this map can occur as provided in Chapters 4.5 and 4.14 of the Corvallis Land Development Code. This information is amended from time to time based on the map refinement process noted above, and includes the refinements below.

Steeply Sloped Areas revised based on high resolution LIDAR data acquired in 2019, which was then converted to two-ft. topographic contours in 2021, consistent with Land Development Code map refinement provisions. Flood Hazard Area data revised based on acquisition of FEMA data in 2021, which includes LOMA / LOMR data updates since 2011.

Natural Hazard Overlays are Approximate.

LEGEND

- Corvallis City Limits
- Urban Growth Boundary
- Streams

Flood Hazard Areas

- 0.2-Ft. Floodway
- 100-Year Floodplain
- High Protection
- Partial Protection

Steeply Sloped Areas

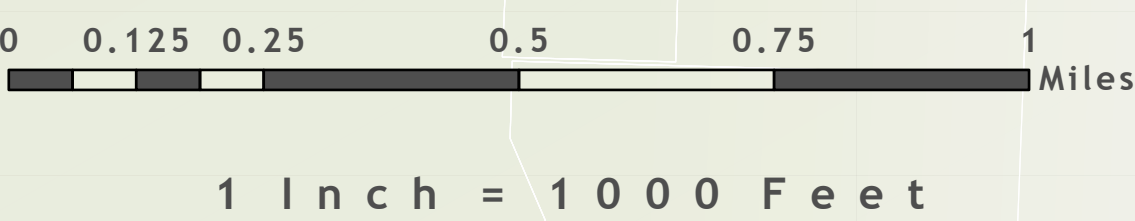

- 10-14.99% Slope
- 15-24.99% Slope
- 25-34.99% Slope
- 35% and greater Slope

Landslides Risk

- High
- (Includes high landslide risk areas, existing landslide areas and landslide debris runoff areas)
